SETUP UPDATES

Hey everyone, touch wood you've had a good day?

Mexico Setup Changes :)

Im excited to say, the V1 specification of the Mexico setup is now live.

For Mexico, I have increased the front and rear wing to give the car more grip around the lap. Although this has lowered the top speed slightly, the extra corner speed has resulted in faster lap times overall.

I have lowered the front spring to help the front axle absorb the kerbs better, especially through Sector 1. The rear spring has then been increased to help with the rotation of the car through the corners.

Finally, I have increased the rear tyre pressures to help with tyre temperature management throughout the lap.

Overall, these changes have made the car quicker around the lap, with better kerb handling and more rotation through the corners.

Have a great day, speak soon

Brendon
