SETUP UPDATES

Hey everyone,

Hopefully you all had a good day?

I'm happy to share that the V1 specification of the Silverstone setup is now complete.

Silverstone Setup Changes

For Silverstone, the focus was on improving straight-line speed without compromising the confidence needed through the circuit's high-speed corners.

The rear wing has been lowered to increase top speed on the straights. To complement this change, rear suspension stiffness has been increased to provide a more consistent level of rear grip through the faster sections of the circuit. These two changes work hand in hand, allowing the car to maintain stability while benefiting from the reduced drag.

To complete the update, the front anti-roll bar has been increased to create a more stable front axle throughout low, medium and high-speed corners. This gives the car a more predictable front end, allowing it to rotate consistently from corner entry through to corner exit.

Overall, the setup offers improved straight-line performance while maintaining the stability and confidence needed through Silverstone's high-speed corners.

With that being said, Thank you to everyone for your support :) Hopefully you all have a great time watching the British GP this weekend.

Wishing you all a fantastic rest of your day
