BRENDON LEIGH SETUPS **Date:24/08/2026**

SETUP UPDATES

Hey everyone, touch wood you've had a good day?

I'm excited to say, the V1 specification of the COTA setup is now live.

COTA Setup Changes

For COTA, the change I've made is lowering the rear anti roll bar. The aim of this is to create a more stable car on turn in, while also delivering a little bit more traction on corner exit.

Of course, in the grand scheme of things this is quite a small change compared to previous setup adjustments, but I prefer to change what I feel works rather than searching for settings to change for the sake of it :)

With that being said, thank you everyone for your support. I can't wait to develop Mexico, as that will be the next track to be updated.

Have a great day, speak soon

Brendon
